

How to use your new VISA chip card

USING A CHIP CARD READER

Not all chip card readers will look the same so follow the prompts on the screen.

- 1) Insert your card facing up with the chip end of your card into the card reader.
- 2) Follow directions to complete the transaction and sign or use your PIN.
(Some transactions may not require either.)
- 3) When the transaction is complete, remove your card.

If a business isn't equipped with a chip card reader, just swipe and sign as usual.

AT AN ATM

ATMs are currently being updated for embedded chip cards. During this process, you should use your card as usual, and follow the prompts on the screen to continue the transaction. A chip-enabled ATM will hold your card until the transaction is complete, so always remember to take your card when finished.
